

Student Attendance through Facial Recognition

FaceID

Anseo Enterprise with FaceID is a complete time and attendance

and access control system that uses face recognition technology to instantly identify students.

The system provides a touch-free, hygienic alternative to fingerprint and hand readers, while still eliminating “buddy punching” and the need for cards or badges.

Students simply look at the device and within seconds they are identified and their attendance is registered in the morning and/or the afternoon.

rflD

Anseo Enterprise can also use rfiD, the latest card

technology to allow students to register their attendance. A chip in the card is read by the device without any contact.

Track & Store Attendance by Class

The Enterprise PLC module allows schools & colleges to track, report and return student attendance levels per subject/class. This is especially useful for colleges providing PLC and further education courses

- Teachers or Tutors can view their timetable, choose a subject/class.
- View a list of students who registered their attendance and should be present in class.
- Validate the class attendance (i.e. if a student registered their attendance in college but are not present in class the tutor records that fact)

How Does it Work?

- Students register their attendance as they enter the college

10 Years in Irish Education

Anseo Time & Attendance is on the Irish Market for 10 Years this March. To celebrate, Ivertec are offering the following on any systems ordered before Easter 2011.

- 10% Discount
- Free Photo Taking for Card systems
- 10 Weeks Text Messaging Free
- Free Template Registration for FaceID systems
